• Through UNICEF, tablets with the AKELIUS platform were delivered to Basic Education students.

Tijuana, B.C. In a joint effort to improve educational quality and promote digital inclusion, the Ministry of Education, in collaboration with UNICEF Mexico, carried out the delivery of tablets with the AKELIUS platform to Basic Education students.

With the aim of providing technological tools to students to facilitate their learning and academic development, tablets were delivered with the AKELIUS platform; known for its innovative approach to language teaching, this platform will allow them to access high quality educational resources and improve their language skills.

During the delivery ceremony, the Secretary of Education, Luis Gilberto Gallego Cortez, highlighted the importance of this initiative to reduce the digital divide and ensure that all students have access to the same educational opportunities.

"We are committed to the education of our Baja Californian boys and girls, it is essential to transform education, for an academic development of excellence," said Gallego Cortez.

For its part, UNICEF Mexico stressed the relevance of the collaboration between the government and international organizations to promote projects that benefit children and adolescents in the country.

"Education is a right, and this initiative will contribute to the development of students, regardless of their origin or situation, we provide tools that allow them to reach their maximum potential," said Astrid Hollander, Head of Education at UNICEF Mexico.

This program has benefited more than 3,000 students in Baja California and seeks to strengthen the educational system, in addition to promoting digital inclusion in the most vulnerable communities to improve their academic results.

The delivery of tablets with the AKELIUS platform is an example of the joint

collaboration between the government and international organizations to transform Education.
